Instructions

^ COLLAPSE ^

1. Visit w3schools and go to the PHP Tutorial: <https://my-learning.w3schools.com/tutorial/php>
2. Complete the following readings
 1. Introductions Lessons 1.1 - 1.6
 2. Variables 2.1 - 2.2
 3. Echo/Print 3.1
 4. Data Types Lessons 4.1 - 4.5
 5. String Lessons 5.1 - 5.5
 6. Operators and Math Lessons 6.1 - 6.2
 7. Conditionals Lessons 7.1 - 7.6
 8. Loops Lessons 8.1 - 8.7
 9. Functions Lessons 9.1
 10. Arrays Lessons 10.1 - 10.10

Guide:

1. Make sure you're in the main branch locally (`git checkout main`) and `git pull origin main` any pending changes
2. Make a new branch per the recommended branch name below (`git checkout -b ...`)
3. Fill in the items in the worksheet below (save as often as necessary)
4. Once finished, export the worksheet
5. Add the output file to any location of your choice in your repository folder (i.e., a Module2 folder)
6. Check that git sees it via `git status`
7. If everything is good, continue to submit
 1. Track the file(s) via `git add (name_of_file)`
 2. Commit the changes via `git commit -m "some summary of the work"` (don't forget

2. Commit the changes via `git commit -m "some summary of the work"` (don't forget the commit message)
3. Push the changes to GitHub via `git push origin (the_branch_name)` (don't forget to refer to the proper branch)
4. Create a pull request from the homework related branch to main (i.e., `main <- "homework branch"`)
5. Open and complete the merge of the pull request (it should turn purple)
6. Locally checkout main and pull the latest changes (to prepare for future work)
8. Take the same output file and upload it to Canvas

Sub Task #3: What
topics do you still
not feel confident
about? If confident,

≡ Task Response
Prompt

Mention specific concepts/topics

Response:

Compared to other languages in the past such as Java, having variables being automatically declared by the language was a huge difference. Other than that, nothing was too different as it is still an OOP language but there are still little syntax differences that I didn't know

≡ Task Response
Prompt

Mention specific concepts/topics

Response:

I was already familiar with the general data types from learning Java as well as brackets for different lines of code and using semicolons at the end of a line. Also many of the methods had similar functions as to Java's such as the methods to

≡ Task Response
Prompt

At least a few reasonable sentences.

Response:

Even though for the most part, they were similar, I'm not 100% sure about arrays work in PHP yet due to the slight differences in syntax. However, I am sure that once I start practicing with them and/or seeing them in practice and homework,

syntax differences that I didn't know about before. Such as a variable always starting with '\$' and concatenation being done with a '.' instead of a '+' among other things.

convert data types, as well as the functions of for loops and the other loop types. Overall, the basics of PHP are very similar but there are small syntax and method differences.

things will get better with time. Also, I don't know a lot about the HTML related parts of PHP yet but again, I am sure with time and practice, things will get better.
