Instructions

^ COLLAPSE ^

Overview video: https://youtu.be/Vvx_cfdLqqM

Guide:

1. Make sure you're in the dev branch locally and `git pull origin dev` any pending changes.
2. Make a new branch per the recommended branch name below (`git checkout -b ...`).
3. Grab the template code from <https://gist.github.com/MattToegel/48b48377eaa1937c886b7840c449750a>.
4. Create individual PHP files for each problem and save the files inside your `public_html` folder in a subfolder of your choice.
 1. If you don't have this folder yet, refer to the setup lessons (you'll need a few files for the deployment to work).
5. Move the unedited template files to GitHub.
 1. `git add .`
 2. `git commit -m "adding template files"`
 3. `git push origin branch_name` (see below)
 4. Create and open a pull request from the homework branch to main (leave it open until later steps).
6. Note: As you work, it's recommended to add/commit at least after each solution is done (i.e., 3+ times in this case).
 1. Make sure the files are saved before doing this.
7. Fill in the items in the worksheet below (save as often as necessary).
8. Once finished, export the worksheet.
9. Add the output file to any location of your choice in your repository folder (i.e., a `Module2` folder).
10. Check that git sees it via `git status`.

11. If everything is good, continue to submit.

1. Track the file(s) via `git add`.
2. Commit the changes via `git commit` (don't forget the commit message).
3. Push the changes to GitHub via `git push` (don't forget to refer to the proper branch).
4. Create a pull request from the homework related branch to dev (i.e., dev <- "homework branch").
5. Open and complete the merge of the pull request (it should turn purple).
6. Locally checkout dev and pull the latest changes (to prepare for future work).

12. Take the same output file and upload it to Canvas.

Branch name: M2-PHP-Problems

Group

Group: Problem 1

Tasks: 1

Points: 3

^ COLLAPSE ^

Task

Group: Problem 1

Task #1: Problem 1 Evidence

Weight: ~100%

Points: ~3.00

^ COLLAPSE ^

i Details:

Only make edits where the template code mentions.

Solution should ensure that any passed in array will have only the odd values output.
Requires at least 2 screenshots (code + output from heroku dev)

Columns: 2

Task Response Prompt

Explain in concise steps how this logically works

Response:

A total float is given to us for us to add the sum of all the numbers in each array. From there a number variable is created which using the array_sum function stores the sum of all numbers in the array. In order to make sure the numbers are rounded two decimal places, we make a variable for the roundedNumber and then use the round function to make it round to 2 decimal places. From there we declare total to be the final roundedNumber and that is the printed result.

Task Response Prompt

Explain in concise steps how this logically works

Response:

The Output array is created for us which is then used at the end. A forLoop then iterates through the array and as it does we set the output integers to the absolute value of whatever is inside of the arrays which makes them positive. Since array 4 is a String array, we make an if statement that checks if the array was originally a string. If the array was a String Array (array 4), it then stringReverses the output which works in this case as the numbers are only one character and that turns them back into strings before they are output.

^ COLLAPSE ^

Task

Group: Reflection

Task #1: Reflect on your experience

Weight: ~33%

Points: ~0.33

^ COLLAPSE ^

Details:

Talk about any issues you had, how you resolved them, and anything you learned during this process.

Provide concrete details/examples. At least a few sentences.

Task Response Prompt

Response:

There were no major issues with doing this assignment. I would say I learned how to depoly from Heroku for the first time, how PHP works and it's various functions and getting used to the PHP syntax. I would say that PHP isn't that bad as it is very similar to Java which I have used extensively before. Over time, I know it will be like second nature to me.

End of Task 1

Task

Group: Reflection

Task #2: Include the pull request link for this branch

Weight: ~33%

Points: ~0.33

^ COLLAPSE ^

Details:

The correct link will end with /pull/ and a number.

Task URLs
