Overview Video: <https://youtu.be/Xlr017S2CFw>

- **Reminder: Make sure you start in dev and it's up to date**
 1. `git checkout dev`
 2. `git pull origin dev`
 3. `git checkout -b M3-Challenge-HW`
- 1. Create a copy of the template given here:
<https://gist.github.com/MattToegel/77e4b66e3c73c074ea215562ebce717c>
- 2. Implement the changes defined in the body of the code
- 3. Hint: You may want to use your browser's developer tools to see the script that's pulled in, this may help with a few challenges
- 4. **Do not** edit anything where the comments tell you not to edit, you will lose points for not following directions
- 5. Make changes where the comments tell you (via TODO's or just above the lines that tell you not to edit below)
 1. **Hint:** Just change things in the designated `<style>` and `<script>` tags
 2. **Important:** The function that drives one of the challenges is `updateCurrentPage(str)` which takes 1 parameter, a string of the word to display as the current page. This function is not included in the code of the page, along with a few other things, are linked via an external js file. Make sure you do not delete this line.
- 6. Create a branch called M3-Challenge-HW if you haven't yet

7. Add this template to that branch (`git add/git commit`)
8. Make a pull request for this branch once you push it
9. You may manually deploy the HW branch to dev to get the evidence for the below prompts
10. Once done, generate the output/submission file
11. Add, commit, and push the submission file
12. Close the pull request by merging it to dev (double-check all looks good on dev)
13. Manually create a new pull request from dev to prod (i.e., base: prod <- compare: dev)
14. Complete the merge to deploy to production
15. Upload the same submission file to Canvas
16. Checkout dev and pull latest changes to prepare for future work

Branch name: M3-Challenge-HW

 Task
Screenshots

4 2 1

Screenshot of
the full page

Caption(s) (required) ✓

Caption Hint:

*Describe/highlight what's
being shown*

4 2 1

shows nav ul
method that
changes list
properties

Caption(s) (required) ✓

Caption Hint:

*Describe/highlight what's
being shown*

⇒ Task
Response
Prompt

*Explain how the solution
code makes the navigation
horizontal*

Response:

This code assigns the
value of flex to the display
parameter which allows
the list be freeform and
then the padding variable
keeps the list at it's default
spacing and size which
also keeps it sideways.

4 2 1

makes a nav
ul li parameter
which
specifies the
list style type
and spacing

Caption(s) (required) ✓

Caption Hint:

*Describe/highlight what's
being shown*

⇒ Task
Response
Prompt

*Explain how the solution
code removes the markers
from the nav items*

Response:

This nav ul li parameter
changes the default list
style type from bullet
points to none, removing
the bullet points. There is
also some spacing added
to sure the words are
spaced out properly in the
absense of the bullet
points.

4 2 1

changes the
background
color of nav

Caption(s) (required) ✓

Caption Hint:

*Describe/highlight what's
being shown*

⇒ Task
Response
Prompt

*Explain how you gave the
navigation a background*

Response:

This gives nav a simple
bacgrkound color
assignment of green
which applies to the whole
line across the entire page.
Since it is in line with the
horizontal list, it travels
horizontally to the end of
the page.

changes link color to purple and keeps it underlined

Caption(s) (required) ✓

Caption Hint:

Describe/highlight what's being shown

⇒ Task
Response
Prompt

Explain how you made the links (or their surrounding area) change color on mouseover/hover

Response:

This applies a filter on the links in nav a when they are hovered over that makes them purple and keeps them underlined like the original links.

4 2 1

Eliminates the bullet points and then applies checkmarks strictly to challenge list

Caption(s) (required) ✓

Caption Hint:

Describe/highlight what's being shown

⇒ Task
Response
Prompt

Explain how you changed the challenge list bullet points to checkmarks (✓)

Response:

This code eliminates the bullet points and then applies the checkmarks strictly to the main ul list and not nav ul. From there it puts black checkmarks to the right of the first character in each list.

4 2 1

Changes the first letters in both to uppercase

Caption(s) (required) ✓

Caption Hint:

Describe/highlight what's being shown

⇒ Task
Response
Prompt

Explain how you made the first character of the h1 tags and anchor tags uppercased

Response:

This uses the first-letter parameter on the words in the respective tags so that they are automatically made uppercase.

4 2 1

changes page color

Caption(s) (required) ✓

Caption Hint:

Describe/highlight what's being shown

⇒ Task
Response
Prompt

Explain/describe your custom styling of your choice

Response:

This is a simple addition to the page by changing the body color of the page to light blue.

using :not
indicator

Caption(s) (required) ✓

Caption Hint:

*Describe/highlight what's
being shown*

≡ Task

Response

Prompt

*Explain how the styling for
the challenge list doesn't
impact the navigation list*

Response:

By using the ":not"
indicator, we are able to
tell the code to only apply
the parameter to the
respective list ul and not
the nav ul. This ensures
that all edits are done to
the correct lists.

code that
updates the
title and
header 1 from
link text

Caption(s) (required) ✓

Caption Hint:

*Describe/highlight what's
being shown*

≡ Task

Response

Prompt

*Explain how you updated the
content of the h1 tag and the
title tag with the link text*

Response:

This code sets up a
constant variable of the
nav a link data, iterates
through it and checks to
see if a link is clicked.
When a link is clicked, it
then gets the value of the
clicked link and updates
the h1 tag and title tag to
the value/name of the
clicked link. At the end, it
updates currentPage to
make the title tag
uppercase.

Details:

At least a few sentences

≡ Task Response Prompt

Response:

Getting more indepth pratice with changing elements of a page through style tags was very interesting. It shows that it is helpful for blanket applying styles but also that more indiviual and specialized designs needs to be implemented carefully. It honestly makes me want to try it again on my own not just for pratice but to see if i could make my own website and make it look very nice. Overall, this wasn't very dificulat but there were some parts I needed to look at the slides and other reference material for some help.
