Instructions

^ COLLAPSE ^

1. Visit w3schools and go to the HTML Tutorial: <https://my-learning.w3schools.com/tutorial/mysql>
 1. MySQL and RDBMS Fundamentals Lessons 1.1 - 1.3
 2. Query Basics Lessons 2.1 - 2.8
 3. Data Manipulation Lessons 3.1 - 3.4
 4. Query Techniques Lessons 4.1 - 4.9
 5. Advanced Queries Lessons 5.1 - 5.11
 6. Database Management Lessons 6.3 - 6.15
 7. MySQL Quiz at the end of the tutorial

Guide:

1. Make sure you're in the main branch locally and `git pull origin main` any pending changes
2. Make a new branch per the recommended branch name below (`git checkout -b ...`)
3. Fill in the items in the worksheet below (save as often as necessary)
4. Once finished, export the worksheet
5. Add the output file to any location of your choice in your repository folder
6. Check that git sees it via `git status`
7. If everything is good, continue to submit
8. Track the file(s) via `git add`

9. Commit the changes via `git commit` (don't forget the commit message)
10. Push the changes to GitHub via `git push` (don't forget to refer to the proper branch)
11. Create a pull request from the homework related branch to main (i.e., main <- "homework branch")
12. Open and complete the merge of the pull request (it should turn purple)
13. Locally checkout main and pull the latest changes (to prepare for future work)
14. Take the same output file and upload it to Canvas

Group: Reflection
Task #1: Fill in the below prompts
Weight: ~100%
Points: ~2.00

^ COLLAPSE ^

Columns: 1

Sub-Task

Group: Reflection
Task #1: Fill in the below prompts
Sub Task #1: What concepts/topics were totally new to you?

⇒ Task Response Prompt

Mention specific concepts/topics

Response:

Most of the more advanced query select options such as the join, union, primary keys and more were mostly unknown to me as I haven't extensively used MySQL before. All of the join techniques I didn't know about before and those seem to have a very important role when it comes to sorting data so I hope to familiarize myself with that soon. I also didn't know about all of the many ways to delete/clear a table depending on what you want to do with it. Overall, I think MySQL will be complicated to master but with time, I'm sure I can get somewhere that's workable.

Sub-Task

Group: Reflection
Task #1: Fill in the below prompts
Sub Task #2: What concepts/topics were you already familiar with?

⇒ Task Response Prompt

Mention specific concepts/topics

Response:

I already knew about the basic, SELECT, UPDATE, INSERT and DELETE commands (among others) as I did use SQL/MySQL in another class before to simply see how it works. However, I was not aware of more of the advanced concepts besides the Wildcard option and a few others such as Order By and NULL.

Sub-Task

Group: Reflection
Task #1: Fill in the below prompts
Sub Task #3: What topics do you still not feel confident about? If confident, explain why.

⇒ Task Response Prompt

At least a few reasonable sentences.

Response:

I did explain this a little in the first answer but I am a little taken back by all of the new information covered in this chapter. Overall, it is simple and easy to understand as most of the commands and logic follow a very human readable process but also trying to remember all of it and what it means will be difficult over the long term. I know that as long as I practice and think hard about what the code could mean, I will be fine (along with continuing to study off of W3 Schools and other websites), however I think this one will be one of the harder languages considering how different it is from the rest due to its very specific purpose and unique commands.

considering how different it is from the rest due to its very specific purpose and unique commands.
