Overview Video: <https://youtu.be/3pDB8m62tgM>

1. Create a repository on github, use the format `ucid-course-section` as the repository name.
2. Make sure it's set to private
3. Go to Settings -> Manage Access -> Invite Collaborator -> Search for my ID **MattToegel** and send an invite; if your section has a grader do the same for their github username (refer to course announcements)
 1. **Note:** Once in a while the invite doesn't get created correctly and you'll need to resend it, keep an eye on the acceptance of the invite since this is required for further HW validations. A comment will be left on Canvas for the submission if the invite is missing at the time of grading).
4. From the terminal / command line create a new branch called **M1-GettingStarted**
5. Create a README.md file and add it to the branch
6. Fill in some basic details:
 1. Course/Section
 2. Your name (first is fine)
 3. Brief info about yourself you'd like to share
7. Hint after creating the file
 1. `git add README.md`
 2. `git commit -m "my readme file"`
 3. `git push origin M1-GettingStarted`
 4. Create a pull request from this branch (via github.com)
 5. Don't merge/close the pull request yet
8. Fill in the below deliverables.
9. Once finished, ensure it's saved and click the "Export" button.

10. Move the generated PDF into your local repository folder at any location of your choosing.
11. Do the following commands
 1. `git add .` (this will add all changes)
 2. `git commit -m "adding output file"`
 3. `git push origin M1-GettingStarted`
12. Go back to github and merge the pull request that was opened
13. Go to Canvas and upload the same PDF that you just downloaded and pushed to GitHub

Note: Having the submission saved and active keeps it eligible for grading.

Task #1: Talk about what you learned during this module, anything interesting, new, etc.

Weight: ~50%

Points: ~3.00

iDetails:

Should be at least a few sentences for full credit

↓

Task Response Prompt

Response:

It was very nice to have a refresher on setting up our repositories with GitHub. It was more involved than the first time as the extensions for PHP and SQL take more setup than just installing them but using Professor Toegel's videos, they were very easy to manage. Overall, I am excited for what comes next in this course as even though the material might look a little challenging/new, I know we will learn a lot of interesting things. The thing I am excited for the most is the databases as I have always been interested about SQL/MySQL.

End of Task 1

Task

Task #2: Did you have any issues? If so, how did you resolve them? If no issues, just type "no issues"

Weight: ~50%

Points: ~3.00

^ COLLAPSE ^

≡ Task Response Prompt

Response:

There were no major issues throughout the entire process. Following the videos and slides to complete the setup and configurations was easy and straightforward.
